

CAIR and EMR's

How will the BARR Immunization Registry Software, CAIR, work with my EMR or EHR?

The State feels that an important goal of the CAIR software is to have integration with Electronic Medical Records (EMR) or Electronic Health Records (EHR). Current hurdles to that goal are as follows:

- ◆ Many different EMRs in the Market
- ◆ Many different functions within the EMRs
- ◆ Standardization of data communication
- ◆ Standardization of business rules (ex: matching files)

What can we do now? How do I get rid of double entry?

CAIR has the capability to export flat files that can be directly imported into whichever EMR you are using. These files contain:

- ◆ Patient demographic information
- ◆ Vaccine History
- ◆ Adverse Reaction History
- ◆ Total number of records

What is CAIR's plans for the future?

CAIR plans to continue working on creating better solutions for Providers. This includes:

- ◆ Making more of the Registry reports available for export.
- ◆ Staff have recently completed an HL7 messaging standard for the California Immunization Registry.
- ◆ Working on developing key sharing partners.
- ◆ Continuing to monitor technology and how it will benefit CAIR users.
