- Rates, percentages and confidence limits are not calculated for zero events.
- Rates are deemed unreliable based on fewer than 20 data elements.
- Healthy People 2020 (HP 2020) National Objective has not been established.
- b National Objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files.

California's data exclude multiple/contributing causes of death.

- Prevalence data are not available in all California counties to evaluate the Healthy People 2020 National Objective STD-1, as the Healthy People objective is restricted to females
- who are 15-24 years old and identified at a family planning clinic, and males and females under 24 years old who participate in a national job-training program.

Data not available.

Sources

Crude death rates, crude case rates, and age-adjusted death rates are per 100,000 population. Birth cohort infant death rates are per 1,000 live births.

The age-specific birth rates are per 1,000 female population aged 15 to 19 years old.

County Previous refers to previous period rates. These periods vary by type of rate: Mortality 2008-2010, Morbidity 2008-2010, Infant Mortality 2007-2009, Natality 2008-2010, Census 2011.
